## **REASONS FOR ALLOWANCE**

- 1. In response to applicant's amendment filed 1/15/2002, claims 1-2, 13, 18-20 have been amended and claims 8, 12, 17, 24-25 have been canceled. Applicant's arguments have been considered and found persuasive in that Morgan (5,574,738) implicitly teaches away from the absorbing layer being located at or near a null in a standing optical wave pattern in closest proximity to an emission facet so as to minimally interact with transmission light in the optical cavity, and further so as to strongly interact with external light reflected back into the cavity because Morgan teaches a saturable absorber to accomplish self-pulsing and the saturable absorber in Morgan must avoid being placed exclusively at a null of the cavity standing wave pattern, where it would be able to interact with the light in that pattern.
- 2. Claims 1-7, 9-11, 13-16, 18-23 are pending and allowed.
- 3. The following is an examiner's statement of reasons for allowance: The claims are allowed primarily because the cite prior art do not teach or fairly suggest a VCSEL comprising along with all the other claimed features the absorbing layer being located at or near a null in a standing optical wave pattern in closest proximity to an emission facet so as to minimally interact with transmission light in the optical cavity, and further so as to strongly interact with external light reflected back into the cavity or the absorbing layer comprising a layer of conductive material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
